Proof of Replit Use

SDC 2026 · Team ICEMAN · Future-Ready RPG

Team	ICEMAN
Project	Future-Ready RPG (Domain 1: Aiversecity Future-Ready Workforce)
Team leader	Eashwar Singh Sidhu
University	Asia Pacific University
Replit account	Donkey (Personal workspace), shown in Figures 2 to 4
Replit project	SDGGEZ
Replit plan	Replit Core (sponsor-provided)
Live deployment	https://sdggez.replit.app
Deployment settings	Reserved VM, 0.5 vCPU / 2 GiB RAM, Asia region, public access
Code repository	https://github.com/eaergfyl-maker/SDGGEZ
Screenshots taken	24 October 2026

How we used Replit

- **Live hosting.** The public prototype runs on Replit Deployments at sdggez.replit.app. One FastAPI backend serves both the API and the browser app, and the deployment is built from the **main** branch of our GitHub repository.
- **Shared workspace.** The project was imported from GitHub into a Replit workspace, where the team runs the app and checks it before publishing. GitHub stays the source of truth.
- **Secrets.** Keys are kept in Replit Secrets (REFRESH_TOKEN, RUNPOD_API_KEY, RUNPOD_ENDPOINT_ID, SESSION_SECRET), not in the repository. Figure 4 shows the names with every value hidden.
- **Replit Agent.** Used for environment setup (.replit, replit.md) and some frontend code, as declared in our Technical Tools Declaration.

What the screenshots show

- Figure 1: the live site loads at sdggez.replit.app for a visitor who is not logged in.
- Figure 2: the Replit deployment is Live under our account, with its domain, access and size.
- Figure 3: the project and the running app inside our Replit workspace.
- Figure 4: the secrets are stored in Replit, with their values hidden.

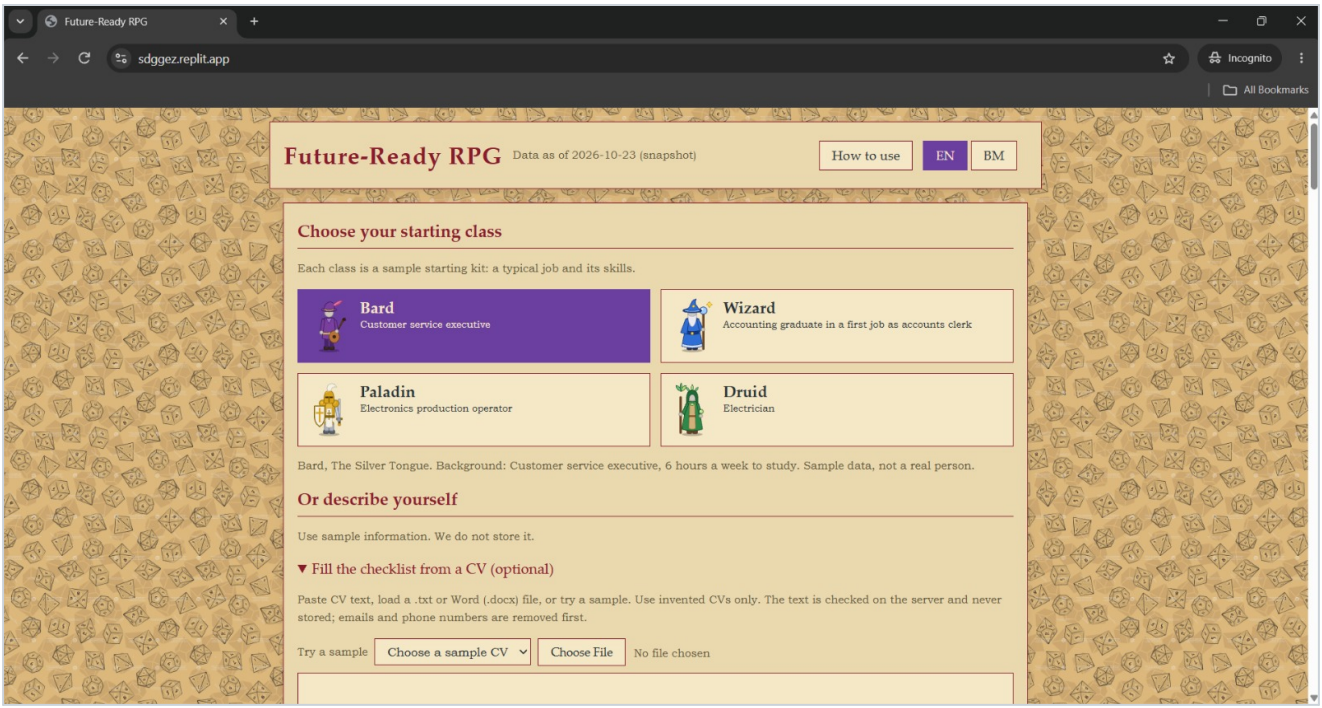

Figure 1. The live app at sdggez.replit.app, opened in a private (incognito) browser window.

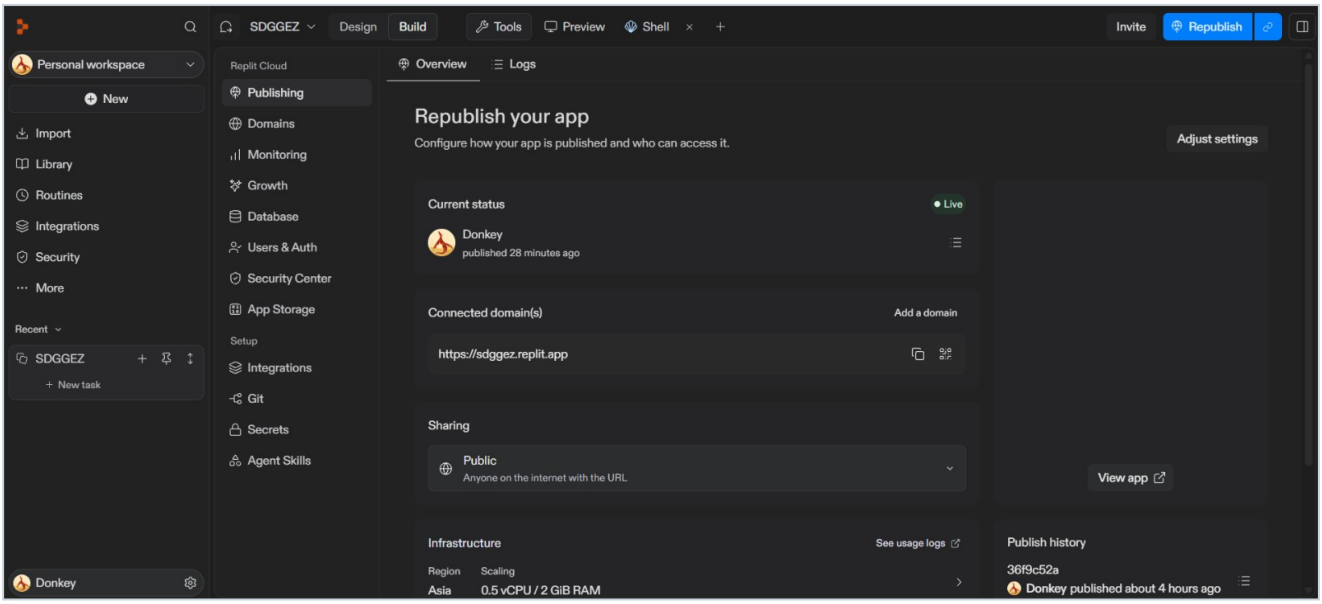

Figure 2. The Replit Publishing page for SDGGEZ: status Live, published by the account Donkey, domain sdggez.replit.app, public access, Asia region, 0.5 vCPU / 2 GiB RAM.

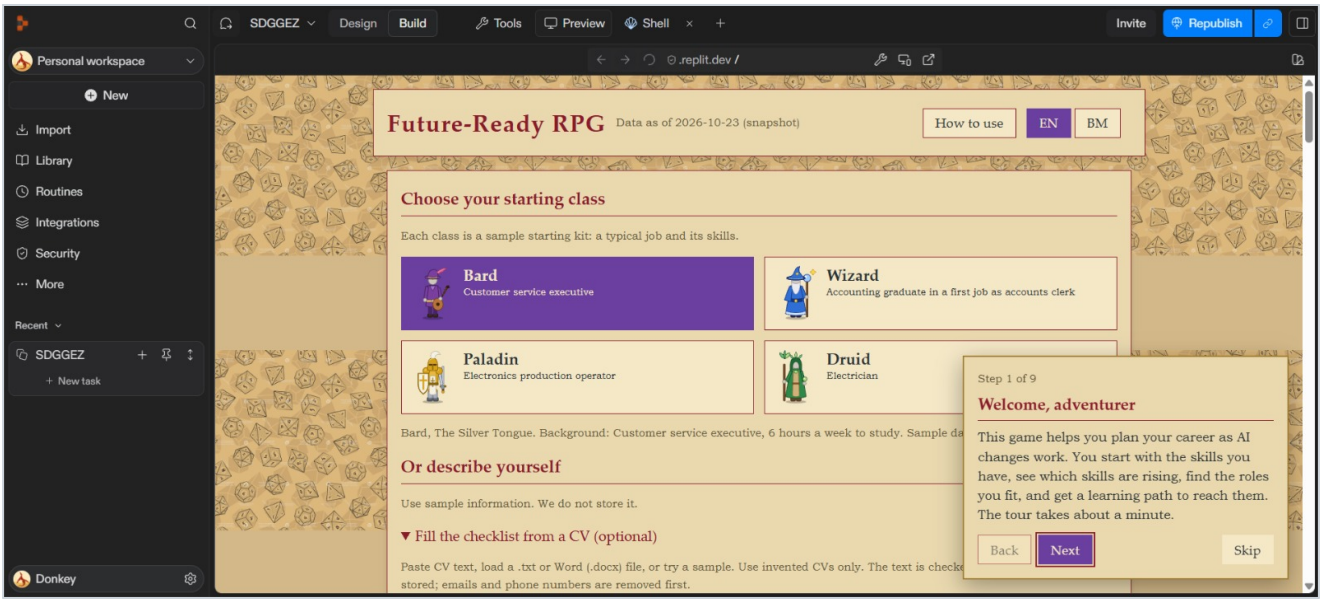

Figure 3. The SDGGEZ project in the Replit workspace (Personal workspace, account Donkey), with the app running in the preview pane.

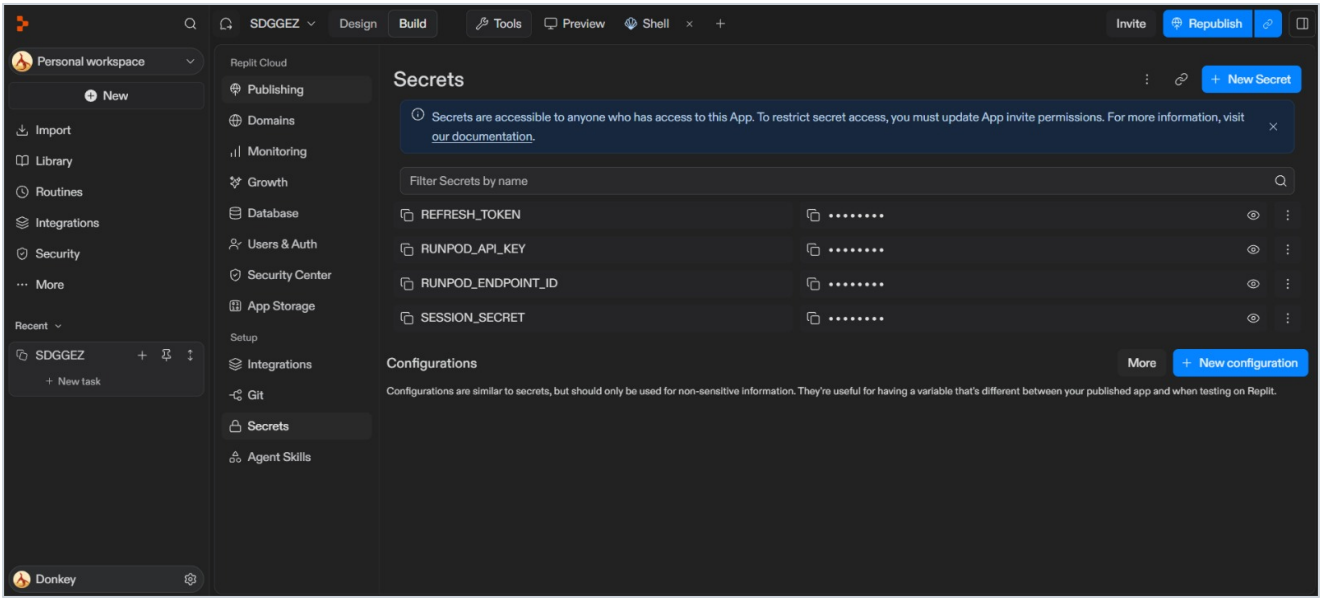

Figure 4. Replit Secrets for SDGGEZ. Only the names are shown; all values are hidden.
